# Week 5: Deployment on Heroku

Data, Model

All the data and model used for this week's assignment is identical to the previous week's assignment. I used the car_details_v3 dataset to develop a linear regression model for predicting the used car price with the information about year, selling_price, km_driven, owner, seats.

Deployment

1. Signed up to Heroku account and created a new app: heroku_dep_scho
2. Connected the app with git hub repository: scho249 heroku_deployment

3. Enabled auto deployment and deployed the main branch

I currently am getting the above error message when I open my app on heroku. I wasn't able to figure out why such error is occurring. It seems like this has been a same problem with others according to the recent discussion https://canvas.instructure.com/courses/4911823/discussion_topics/15344150. I would love to get feedback on this issue.
